Bones of the Human Body

WORD MEANINGS

Read the meanings, then try using a new word in a sentence.

Cranium
The part of the skull that surrounds and protects the brain.

Mandible
The lower jawbone, which moves when you chew or speak.

Clavicle
The collarbone, linking the breastbone to the shoulder blade.

Scapula
The shoulder blade, a flat bone at the back of each shoulder.

Sternum
The breastbone in the middle of the chest, where many ribs attach.

Ribs
Curved bones around the chest that help protect the heart and lungs.

Vertebrae
The small bones that form the backbone and protect the spinal cord.

Humerus
The bone in the upper arm, between the shoulder and elbow.

Radius
The forearm bone on the thumb side when your palm faces forwards.

Ulna
The forearm bone on the little-finger side when your palm faces forwards.

Femur
The thigh bone, between the hip and knee; the longest bone in the body.

Patella
The kneecap, a small bone at the front of the knee.

Tibia
The larger lower-leg bone, often called the shinbone.

Fibula
The thinner lower-leg bone, beside the tibia on the outer side of the leg.

Phalanges
The bones that make up your fingers and toes.
